

Supplemental Figure 3. Flow cytometry analysis of immune cell population in CT2A tumor bearing mouse brains

(A) Scheme of flow cytometry analysis of mono nuclear cells isolated from whole brains from different treatment groups (3 mice/group). Cells were stained with antibodies recognizing CD45, CD11b, Gr-1, CD11c, CD4 and CD8, and analyzed by flow cytometry. (B) The number of mononuclear cells isolated from mouse brains of experimental groups (n=3/group).
