

## Supplemental Figure 6

**Supplementary Figure S6. SHP2 inhibition enhances suppression of MAPK signaling in the presence of KRAS<sup>G12C</sup> inhibition.** Individual densitometry quantification of phospho-ERK levels from KRAS<sup>G12C</sup> mutant cell lines treated with ARS-1620 (1  $\mu$ M), SHP099 (10  $\mu$ M) or a combination for 0, 4, 24, 48, and 72 h in Figure 3.
