

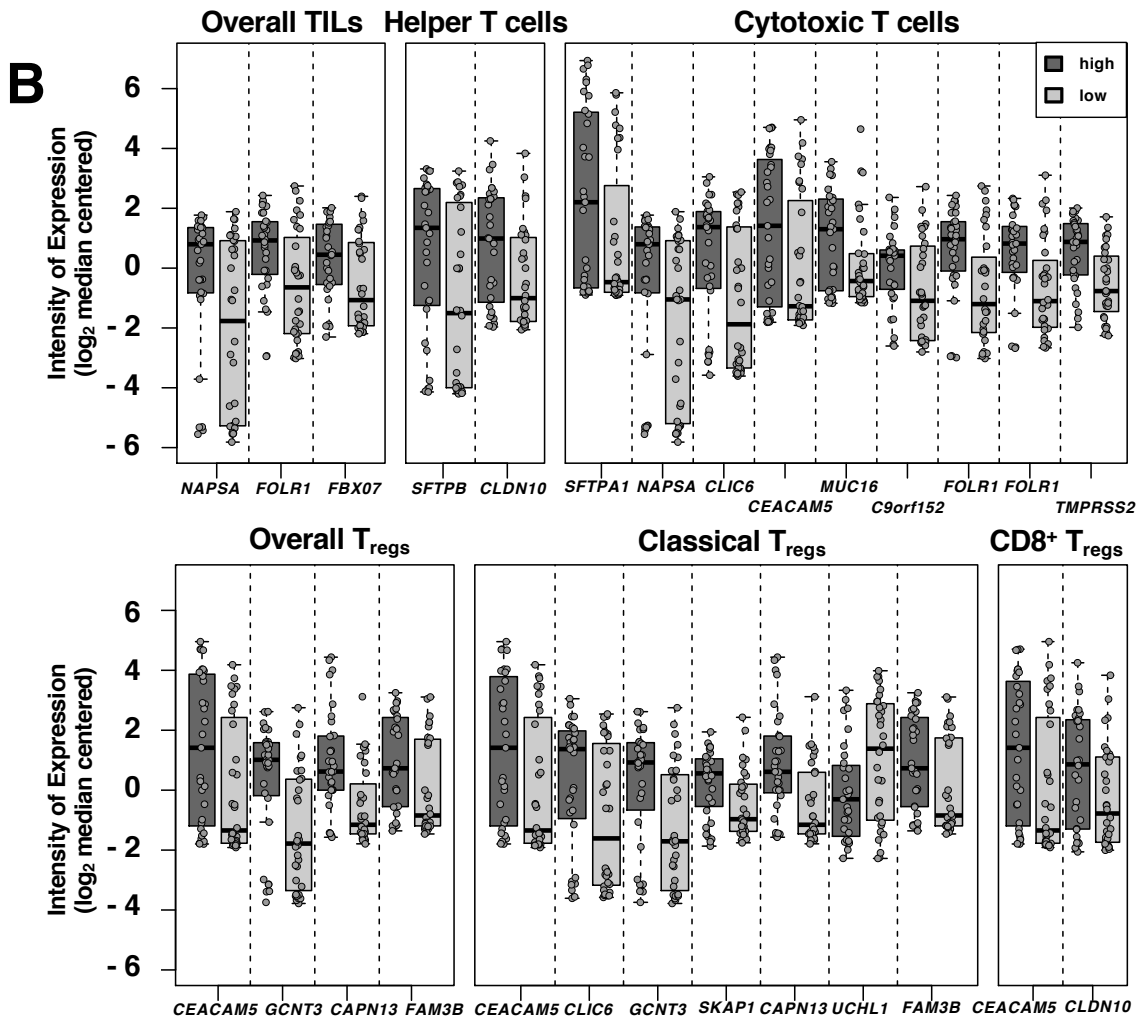

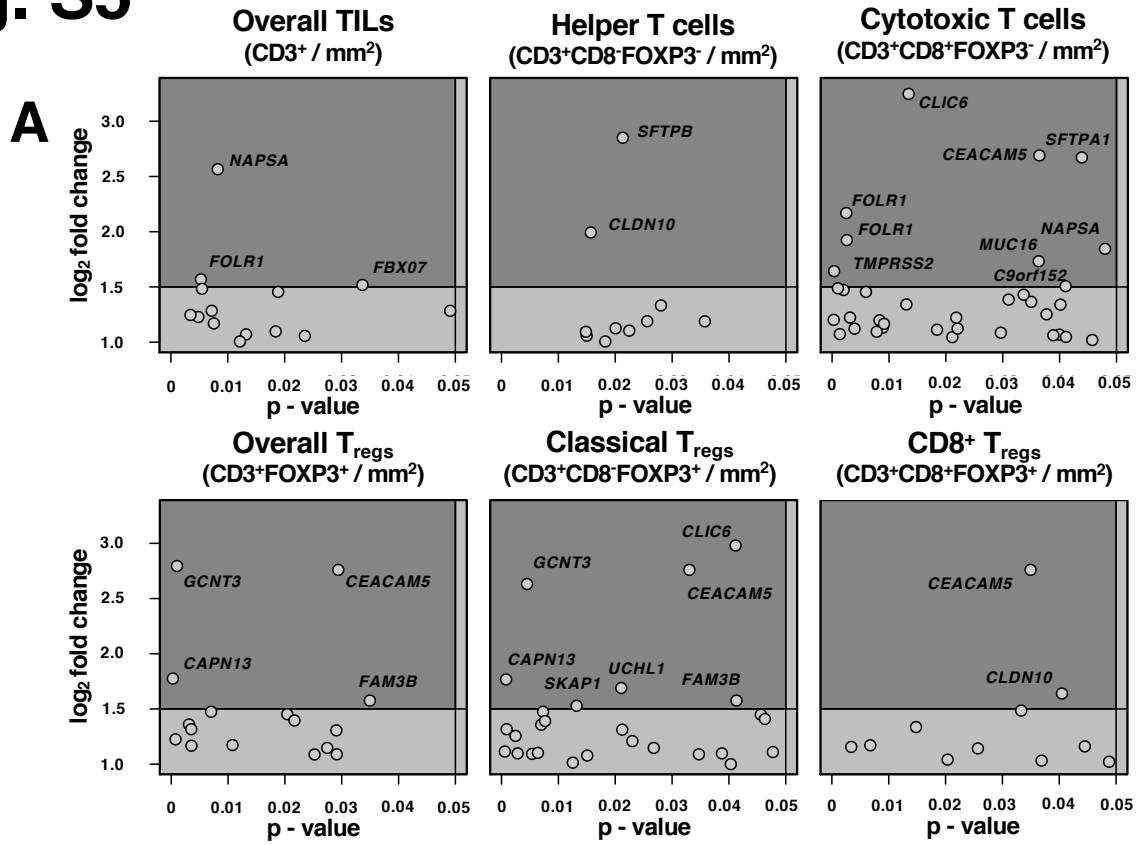

**Fig. S5**

**Figure S5.** Differentially expressed genes and boxplots of gene expression. **A** Scatterplot of differentially expressed genes between the different groups of high and low T cell density in overall TILs and their subtypes. Cut-off for differential expression: Log-rank p-value < 0.05 and log2 fold-change > 1.5. **B** Boxplots displaying gene expression between the surfactant<sup>high</sup> and surfactant<sup>low</sup> group for differentially expressed genes in each of the TIL infiltration subtypes.
