

SUPPLEMENTARY FIGURE 4

Supplementary Figure S4. Exposure-response analysis of C_{max} on C1-D1 vs. best response in LGG subjects.

Twenty-one LGG subjects with available best response and PK data are depicted. Subjects were treated at 1500 mg BID, except the 2 that are circled who were treated at 1200 mg BID. The 4 subjects indicated with age/sex labels are considered to have experienced the best therapeutic activity of the 21 subjects depicted (see **Supplementary Table S5**).
