

1<sup>st</sup>-line PFS Univariate Analysis

## Characteristics

## Comparisons

HR (95% CI)

Pvalue

Supplementary Figure 3. Forest plot showing the prognostic value of clinicopathologic and molecular features in patients treated with first-line ICI+TKI combination therapy.  $HR < 1$  indicates better survival in the comparator group, while  $HR > 1$  indicates better survival in the control group. TMB, tumor mutation burden; MUT, mutation; WT, wild type; TPS, tumor proportion score; CCP, cell cycle progression; Sig., signature.
