## ABOUT THE COVER

The cover shows a portion of the coronal section of the mouse brain that displays syngeneic SB28 glioblastoma in the cortex. Importantly, immune cells that are highlighted in *yellow* and *purple* do not only increase in the direct vicinity of the tumor (*green*) but also in the contralateral hemisphere (*top*). Involvement of the corpus callosum (*center*) indicates migration of contralateral immune cells to the tumor. For details, see the article by Bartos and colleagues on page 4618 of this issue.
