

**Supplementary Figure S3. Expression of matrisome proteins in a desmoid tumour cohort (n = 37) split into 3 groups based on the % tumour content.** (a) Median log2 normalised expression of matrisome proteins enriched in desmoid tumours when classified by percentage tumour content (75-80%, ≥80-90% and ≥90%). (b) Log2 normalised expression of exemplar matrisome proteins from collagen, glycoprotein, proteoglycan, ECM regulators, ECM-affiliated proteins and secreted factors classes, ns = non significant, \* $p < 0.05$ .
