

Figure S1. The cTMB and outcome of ICB monotherapy in the discovery cohort.

A. Boxplot showing the cTMB (y-axis) for patients with/without DCB (x-axis). Boxes, whiskers, and dots indicate quartiles, 1.5 interquartile ranges, and individual data points, respectively. Wilcoxon rank-sum test-based two-sided P-value is shown.

B. Stacked barplot of the percentage of patients with (green) or without (red) DCB (y-axis), stratified for low (<10 muts/Mb) vs high (≥ 10 muts/Mb) cTMB (x-axis). Fisher's exact test-based two-sided P-value is shown.
