

**Supplementary Figure S5. High expression of G3BP2 is a prognostic factor of prostate cancer patients.**

(A) We used a different cohort of prostate cancer patients from the previous report (17). Immunohistochemical (IHC) analysis was performed to analyze the G3BP2 expression levels. Asteric indicate the benign prostate regions. The asteric (\*) indicates benign prostate regions. (B) High expression of G3BP2 (N = 12) is a significant prognostic factor of prostate cancer patients ( $P < 0.0001$ ). Kaplan–Meier analysis using the log-rank test was performed.
