

Figure S2. Acute cisplatin treatment increases SKOV-3 cell polyploidy. (A) Basal nuclear DNA (nDNA) content was quantified in SKOV-3 and SKOV-3-R cells ($N = 2$, $n = 7-9$). (B) Cells were treated with 10 μM of cisplatin for the indicated times, after which the percentage of polyploid cells was determined. ($N = 2$, $n = 3-4$). * $P < 0.05$, *ns* $P > 0.05$; by Student's t test (A) or one-way ANOVA *versus* time 0 for the same cell line (B).
