

**Supplementary Figure S8. Metabolic profile in SCLC patient's plasma.**

A, Heatmap showing significant differences in plasma metabolite levels (FDR < 0.05) between healthy volunteers (HV, n = 12) and patients with SCLC (n = 9). B–D, Levels of hypoxanthine (B, HXN), inosine monophosphate (C, IMP), and UDP-glucose (D) were significantly higher in patients with SCLC. \* $P$  < 0.05, \*\* $P$  < 0.01, \*\*\* $P$  < 0.005 vs. HV by two-tailed Student's t-test.
