

Supplemental Data

Haluska et al

Running Title: BMS-536934 efflux by BCRP

Supplemental Figure 1.

Graphical representation of changes in ABC transporter family members represented in microarray experiments in MCF-7R4 cells compared to parental MCF-7 cells for genes with MCF-7R4/MCF-7 expression ratio <1 .

Supplemental Figure 2.

A) ABC transporters that are significantly differential expressed between MCF7-924R vs. MCF-7 parental cells by DNA microarray analyses.

B) Fold changes of ABC transporter family members comparing MCF7-924R cells to parental MCF7 (only present the members with fold change >1).

Supplemental Figure 3

Subconfluent cell cultures of MCF-7 and MCF-7R4 cells were harvested, lysed and subjected to western blotting with indicated antibodies as described in the Methods section.
