

Supplementary data
Fig.S3

A

B

Comparison of the cytokine activity of RD_IL-15_scFv and scFv_RD_IL-15. (A) Human PBMCs were labeled with CFSE and incubated with the respective fusion protein at indicated concentrations for 7 days, followed by proliferation analysis via flow cytometry. (B) CTLL-2 cells were starved for 4 h before the addition of fusion proteins at indicated concentrations. After 3 days, cell proliferation was measured by MTT assay. Graphics show mean \pm SD, n=4 (A) and n=3 (B).
