

Gross et al., "Antitumor Activity of the Glutaminase Inhibitor CB-839 in TNBC"
Supplementary Figure S5

Supplementary Figure S5: Induction of apoptotic cell death by CB-839. Caspase 3/7 activation measured in MDA-MB-231, HCC1806 and JIMT-1 cells after treatment with DMSO or 1 μM CB-839 for 72 hours. A parallel plate was analyzed for cell number and the amount of caspase 3/7 activation per cell is plotted. The mean and SEM from duplicate measurements are shown.
