

Figure S2

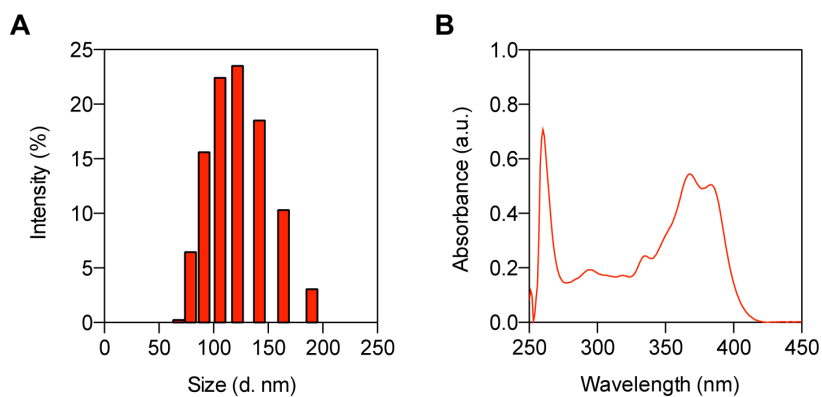

Figure S2. Representative size distribution of nanoliposomal irinotecan (nal-IRI) and absorbance spectrum of nal-IRI in DMSO. (A) Mono-dispersed nal-IRI is approximately 115 nm in diameter with a Polydispersity index below 0.1. (B) Nal-IRI absorbance spectrum was measured in DMSO, and the irinotecan concentration was determined by UV-Vis spectroscopy with appropriate standard curves.
