

Figure S4. A-498 subcutaneous xenograft responses to compound 1 (NSC 773097), compound 2 (NSC 773392), and compound 6 (NSC 782846). Mice were dosed intraperitoneally at indicated days with 200 mg/kg (▼) or 100 mg/kg (▼). Asterisks indicate a single mouse that was not dosed on day 4, but instead received 200 mg/kg on day 8. Rows 1–3 show a single group of vehicle control mice injected with 100% DMSO on days 17–21, 27, 31, and 35. Row 4 is a separate experiment with independent control group. Column A, Kaplan-Meier event-free survival plots. Column B, tumor weight summarized by median  $\pm$ MAD. Column C, tumor weights for individual animals. Column D, relative mouse weight summarized by mean  $\pm$ SD. Column E, relative mouse weights for individual animals.
