

**Figure S6**

CD4 and CD8 T cell dynamics in response to bispecific and ADCs in cynomolgus monkeys. CD4 T cells (A, C and E) and CD8 T cells (B, D, and F) in peripheral blood of cynomolgus monkeys were enumerated by flow cytometry after treatment with either bispecific or ADCs on day 2, 4, and 10 (bispecific) or days 15, 29, and 46 (ADCs). Monkeys were dosed IV with test articles on either days 1 and 8 (bispecific) or days 1, 22, 43 (ADCs). n=2 animals per group for all studies and each line represents a single animal.
