

A

AA8, 24 hr after washout of CNDAC (10 μ M 8 hr)

B

AA8, 42 hr after washout of CNDAC (10 μ M 8 hr)

Supplemental Figure S8. Multinucleation or nuclear fragmentation revealed in AA8 cells stably expressing H2B-GFP after CNDAC washout. Cells were incubated with 10 μ M CNDAC for 8 hr before release into drug-free medium and monitored through the following 2 days. Images of randomly selected fields were captured for bright field, fluorescence and merged channels using 20 \times objective. Merged images of 24 hr (**A**) and 42 hr (**B**) post washout are shown.
