

**Supplementary Figure S4.** Nuclear morphological categories of Giemsa-stained cells after cytopsin. **A**, interphase; **B**, metaphase; **C**, bi-nuclei; **D**, tri-nuclei; **E**, with single small nucleus; **F**, with two small nuclei; **G**, multinucleate. Cells with morphology as shown in C-G are scored as multinucleation and counted toward “% multinucleate” in Figure 4A and Supplementary Table S1.
