

Supplementary Figure 3A. Macroscopic comparison of PDX tumors. Each H&E image represents a cross section through either PDX12 or PDX8 tumors. The samples are arranged according to treatment group. These H&E slides were used for the pathological assessment of tumor cellular content and cross-sectional area (**Fig. 4**). The arrowheads throughout the PDX8 panels point to the tumor or residual tumor bed. Scale bar, ~0.8 cm.

Supplementary Figure 3B. Macroscopic comparison of BCM tumors. Each H&E image represents a cross section through either BCM-3963, BCM-4888 or BCM-3613 tumors (**Fig. 5**). The samples are arranged according to treatment group. Scale bar, ~0.8 cm.
