

Supplementary Fig. S3 CTC enumeration patterns in all population CTCs by best overall response rate.

CTC enumeration in all population CTCs by best overall response rate along with CTC medians at each time point. An increase in CTC/mL at Cycle 1 Day 8 was observed in several patients (CTC medians by best overall response [n]: SD, 1.8 [17]; PR, 0.5 [2]; PD, 0.5 [14]), followed by a significant reduction by Cycle 3 Day 1 or 30-day follow-up. Each line represents one patient and each color represents best overall response status. Abbreviations: CTC, circulating tumor cells; NA, not available; NE, not evaluated; PD, progressive disease; PR, partial response; SD, stable disease.
